Non-Combustible Board Placement

## Minimum Venting Requirements

Minimum permitted venting is shown below. The framing height to the center of the thimble is $50^{\prime \prime}$. Minimum venting must include a $12^{\prime \prime}$ vertical section and a 90 degree elbow which is then terminated horizontally. For a vertical termination please follow the vent pipe manufacturer's installation instructions for vertical vent termination framing. A minimum of 1 in . $(25 \mathrm{~mm}$ ) clearance on all sides of the vertical vent pipe must be maintained. For every $12^{\prime \prime}$ of horizontal run there must be a $1 / 4^{\prime \prime}$ of rise. $1^{\prime \prime}$ of clearance between framing and venting must be maintained at all times. $2^{\prime \prime}$ above the venting and $3^{\prime \prime}$ above an elbow.

## Fireplace Dimensions

## Mantel Projections

Mantel graph dimensions are measured from the bottom of the fireplace, if you wish to reference the mantel height from the tiling edge subtract 15 inches ( 381 mm ) from the mantel height depicted on the graph. If you plan to install a TV above your fireplace refer to the appropriate section of the owner's manual for available options. It is acceptable to install a combustible mantel over top of the noncombustible board. If you are activating the Cool Surface System you are eligible to subtract $12^{\prime \prime}(305 \mathrm{~mm})$ from the mantel height shown in this diagram. See page 6 for more details.

## TV Installation Considerations:

If you are planning to mount a TV above your fireplace some considerations must be made to ensure it is protected from the heat.

## During testing temperatures did not exceed $121^{\circ} \mathrm{F}\left(49^{\circ} \mathrm{C}\right)$ midway up the front wall (see

figures on right). There is no guarantee that these temperatures will not harm the longevity of your TV. Make sure to consult your TV manufacturer's specifications to find the maximum allowable operating temperature. Since every home and installation is unique, temperatures should be verified at the time of install if possible. If desired, front wall temperatures can be lowered to $104^{\circ} \mathrm{F}\left(40^{\circ} \mathrm{C}\right)$ with the use of a mantle (see CSS TV clearances with Mantle figure). See revised mantle clearances chart above. A TV should not be installed if temperatures exceed the manufacturers maximum allowable temperature.
